DETAILED ACTION

Specification

1. The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: Claims 4 and 11 disclose:

"... wherein the etching ratio of the second conductor film is smaller than the etching ratio of the first conductor film by the etching method."
however the specification does not disclose this information.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

3. Claims 1-3, 5, 7, 9, 10, 12 and 17 are rejected under 35 U.S.C. 102(e) as being anticipated by Arita et al. (US 5,624,864).

Arita discloses the steps of:

For claims 1-3, 5, 7, 9, 10, 12, 13 and 17:

forming a first wiring layer (38, fig. 3) over a main surface of a semiconductor substrate;

forming a second wiring layer(40, fig. 3) which is comprised of first conductor film and a first film formed over the first conductor film over the first insulating film(39, fig. 3); and

forming a first contact hole on the second wiring layer in the second insulating film and a second contact hole on the first wiring layer in the first and second insulating films by an etching method through the openings of the first etching mask, wherein the etching ratio of the first film by the etching method is smaller than the etching ratio of the first and second insulating films by the etching method (col. 5, ln. 48 – col. 6, ln. 14 and col.7, lns. 22-30).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 4, 6, 8, 11, 14-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Arita et al. (US 5,624,864).

Arita fails to explicitly disclose some or all the limitations of claims 4, 6, 8, 11, 14-16. However, the etching ratio of the conductors, material of the first film, second conductor film and first insulating film, forming an additional wiring level contacting the interconnects attached to the wiring layers, are well known limitations used in the art of semiconductor manufacturing. Therefore these limitations hold no patentable weight.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Fuller (US 3,657,029) discloses a second conductor having a slower etch rate than a first conductor.
